

We are a lowest environmental impact and lowest density fishfarm (6 kg/m^3), adjacent the Tuscan protected area "Diaccia – Botrona", near Castiglione della Pescaia (Italy).

Our product is a high quality seabass (*Dicentrarchus labrax*) of max. 1 kg weight and 4 years old, taste and texture are the best trademarks. The product safety is guaranteed by the application of our HACCP system, adopted under supervision of the Italian competent institution and the frequent official safety controls. The feed, produced by the most important company in the world, is GMO free and suitable for the sustainable production of healthy fish. In addition to the artificial feed the seabasses eat some natural food organisms. Our market is the Italian market, but we have also exported our product to France and Dubai (United Arab Emirates).

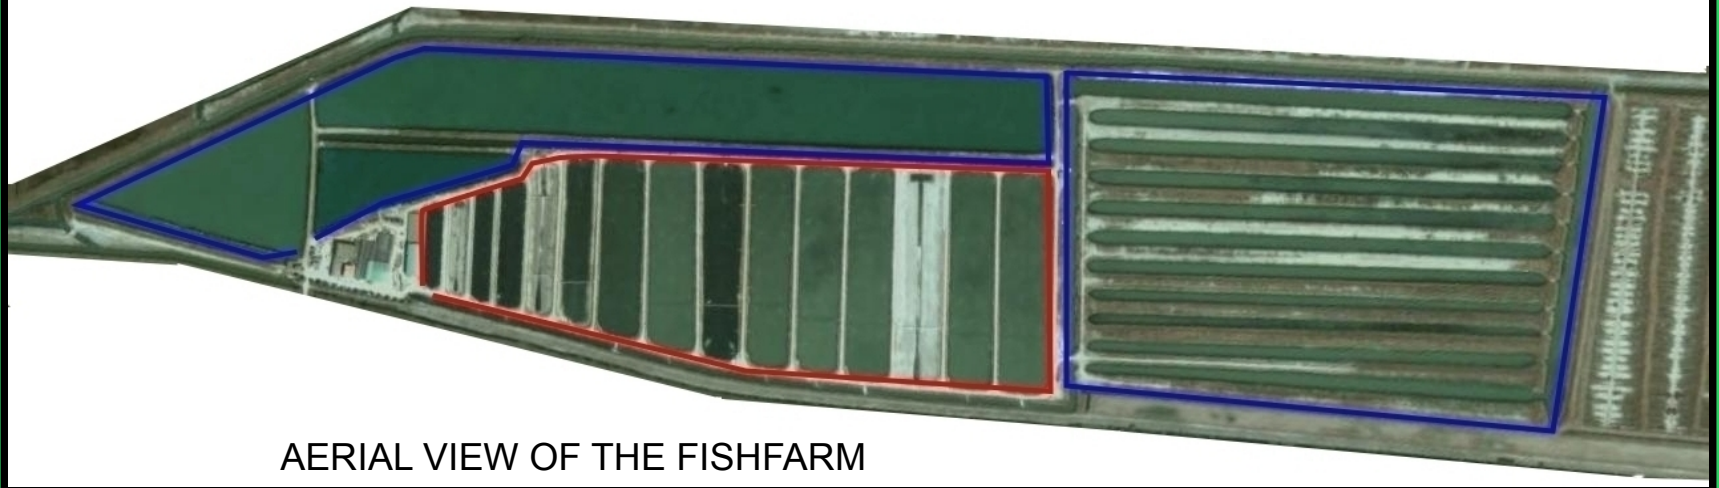

250.000 mc

Water surface destined to fish breeding pools at the max. density of 6 kg/m^3 (not all the pools are contemporary in function).

300.000 mc

Water surfaces destined to artificial wetlands for the upstream and downstream biological depuration.
